

SPECIFICATION

WOOD TYPE:

Engineered wood

BOTANICAL GENUS:

Varies

DURABILITY:

Varies

DENSITY:

Usually between 500 and 1,000kg/M3

MOISTURE MOVEMENT:

Medium

TIMBER PROPERTIES:

Consistent strength and dimensions, lack of natural features, versatile

TEXTURE:

Varies

AVAILABLE SIZES:

Thickness: 6mm - 26mm
Width: 100mm +
Length: 2.4m +

OAK VENEERED MDF

Oak veneered MDF is created by bonding a thin veneer of this popular hardwood to a standard MDF board. This gives you all the benefits of MDF (easiness to work, price, etc.) while adding a beautiful oak finish.

MDF is a versatile and popular material made from wood and resin, with similar applications to plywood – although it is smoother, more consistent, and easier to work.

MDF's versatility makes it suitable for a wide range of projects – but an oak veneer makes it more suitable for highly visible features that you want to add a touch of class to. Some examples of pieces that would suit oak veneered MDF include cabinets, furniture, panel mouldings and fire surrounds.

Whilst Oak Veneered is the most popular of veneered boards, there are also veneered boards available in all of the major commercial grade hardwoods.

We can, of course, lay up virtually any veneer on to most substrates.

PRODUCT OF THE MONTH

EUROPEAN OAK PRIME GRADE

European Oak is a robust hardwood that's found in Central Europe. The timber's durability, versatility, and ability to hold a beautiful finish, has made it a popular staple of craftsmen all around Europe and the UK. Depending on the region in which it is grown, European Oak can vary in character. In Baltic countries, and northern Poland, Oak is hard and tough – by the time you reach southern Poland, it is milder and more uniformly grown.
