## SPECIFICATION

### WOOD TYPE:

Hardwood

### BOTANICAL GENUS:

Liriodendron tulipifera

### DURABILITY:

Slightly durable

### DENSITY:

510

### MOISTURE MOVEMENT:

Medium

### TIMBER PROPERTIES:

Easy to work, versatile

### TEXTURE:

Fine

### AVAILABLE SIZES:

Thickness: 25.4 mm – 76.2 mm

Width: 120 mm and wider

## American Tulipwood

American Tulipwood has white sapwood and olive green to yellow or brown heartwood, which is sometimes streaked with steel-blue. Its strength is comparable to idigbo, and the wood is straight-grained, fine-textured, fairly soft, and light in weight when dried.

Because tulipwood is a relatively strong, very attractive wood, and because it is so easy to work, it has a wide range of interior applications. It finishes to a fine and smooth surface very easily, takes nails without splitting, glues well, and can be stained, polished, or painted. It also holds enamel finishes well.

It's commonly used for furniture, joinery cabinets, doors, panelling, turning and carving.
