SPECIFICATION

WOOD TYPE:

Hardwood

BOTANICAL GENUS:

Fraxinus

DURABILITY:

Not durable

DENSITY:

670 Kg/M3 (but varies by 20% or more)

MOISTURE MOVEMENT:

Medium

TIMBER PROPERTIES:

Strong relative to its weight

TEXTURE:

Coarse

AVAILABLE SIZES:

Thickness: 25.4mm – 76.2mm

Width: 100mm +

Length: 2.1m +

AMERICAN WHITE ASH

American White Ash sapwood is almost white, and its heartwood varies between light brown and reddish brown (not unlike European ash). However, when it's dried, it's a little lighter than European ash. The timber grows in mid-Atlantic and central states of the US as well as some parts of Canada.

American ash is often used for furniture, flooring, doors, architectural interiors, high-end joinery and mouldings, cabinetry, panelling, tool handles, sports goods and turnings, and is becoming popular in the construction of electric guitars.
